eToken SECURE NETWORK LOGON

Strong Protection for PCs and Network Resources

In recent years there has been a rise in the number of security breaches that have resulted in data fraud and identity theft. There is growing concern among business leaders over the rise in corporate espionage and fraud perpetrated by internal personnel who have direct access to PCs, laptops and corporate network resources. But relying on simple passwords to protect your employees' computers and limit access to your corporate network could put your organization at risk.

Expanded Security Applications

Aladdin's eToken Network Logon offers a simple, convenient, and secure token-based solution for securing your employees PCs and preventing unauthorized access to your corporate network.

Aladdin's eToken Network Logon is a security application that extends the use of Aladdin's broad authentication solutions to include strong authentication for protecting PCs and securing onsite local network access. With eToken Network Logon, all the benefits of strong authentication for remote access, can now be applied to users' computers and local network access.

eToken Network Logon ensures that only authorized users with an Aladdin authenticator (what you have) and a single unique password (what you know) can log on to a Windows domain and gain access to PC resources and the corporate network.

Protect your Local Network and PC

eToken Network Logon enables organizations to strengthen their network security and implement strong and complex password policies by allowing users to store multiple logon credentials on a single Aladdin authenticator.

For organizations that want to further harden their network security, eToken Network Logon supports the generation of randomized Windows domain passwords. Users logging on to their PCs need only their Aladdin authenticator, and their authenticator password to generate a randomized, complex and secret Windows domain password. In this way, IT managers can implement two factor authentication without having to deploy a full PKI smartcard infrastructure.

Centralized Management and a Broad Selection of Authenticators

eToken Network Logon is enabled by Aladdin's broad range of certificate-based authenticators. It is also fully integrated with Aladdin's eToken Token Management System (TMS), which provides administrators with a full suite of authentication management services including authenticator deployment, enrollment revocation, user self-service password reset, backup/restoration of user credentials, and a solution for employee on the road lost token situations, allowing employees to stay productive at all times.

Benefits

- Enables organizations to strengthen network security by storing multiple complex passwords on a single authenticator
- Supports generation of randomized complex Windows domain passwords, allowing organizations to implement two factor authentication without having to deploy a full PKI infrastructure
- Supports lost token user scenarios when used together with Aladdin Token Management System and eToken PKI client (when smartcard logon is implemented)
- Fully integrated and compatible with Aladdin's broad range of certificate-based authenticators and security applications, allowing you to enhance your security solutions

Features

- Securely stores network logon credentials on the eToken authenticator
- Communicates with the Microsoft Password Credentials mechanism
- Provides strong two-factor authentication by requiring both the eToken authenticator and a password
- Supports storage and management of multiple user profiles on one authenticator
- Supports generation of random network logon passwords
- Supports network password change procedures
- Supports third party authentication with Sony Felica contactless cards
- Robust deployment and life-cycle management capabilities with Aladdin Token Management System
- Support for Domain Login and Local Computer Login

Technical Specifications

Supported Operating Systems	Windows 2003/ Windows Server 2008/ XP/ Vista <i>*All OS: 32 bit only</i>
Supported Aladdin authenticators	eToken PRO, eToken PRO Smartcard, eToken PRO Anywhere (when eToken PKI Client is installed), eToken NG-OTP, eToken NG-FLASH

* Smartcard login with eToken authenticators requires the presence of eToken PKI client.
