SafeGuard® Enterprise
Your Central Key
for Information Protection

SafeGuard® Enterprise

Your Central Key for Information Protection

Protect your confidential information and comply with regulatory mandates – safely and securely – with Utimaco’s comprehensive SafeGuard Enterprise solution. SafeGuard Enterprise is a modular information protection control platform that enforces policy-based security for PCs and mobile devices across mixed environments. It is fully transparent to end-users and is easy to administer from a single central console. SafeGuard Enterprise provides multi-layered endpoint data security by combining encryption and data leakage prevention (DLP). Its modular architecture provides comprehensive data security tailored to your organization’s needs and growth requirements.

Avoid confidential data loss or theft

According to analyst firm IDC, more than 70 percent of confidential data resides at the endpoint. As a result, the risks of data loss and theft have grown exponentially. The impact of data breaches can be severe, including negative press, damaged reputations, financial penalties, and personal liabilities for responsible company executives. Minimize risk by protecting confidential data with SafeGuard Enterprise.

Manage policy and regulatory compliance risks easily and effectively

Protecting confidential personal data from disclosure is a fundamental legal requirement for many companies worldwide. SafeGuard Enterprise bolsters compliance measures by enforcing centralized policies for encryption and data leak prevention, with verifiable audit logs and reports.

Improve business processes with centralized security control

Managing data security in heterogeneous enterprise environments with various devices and platforms can be challenging. When employees, business partners, and customers have access to data from many locations, protecting this information requires strong, centralized management. SafeGuard Enterprise delivers centralized security control across mixed IT environments, using role-based management to enable granular policy enforcement — far superior to pure point products. Automated tools streamline deployment, and data can be quickly recovered if employees forget passwords, resign, or lose authorization.

Secure productivity and collaboration with state-of-the-art key management

Behind-the-scenes key management enables legitimate users to easily and securely share data across PCs, removable media, PDAs and even e-mail attachments. SafeGuard Enterprise provides centralized, state-of-the-art key management from a single console. Secure storage, exchange, and recovery of keys in mixed environments are made simple and easy to use.

Multi-layered data security with SafeGuard Enterprise

SafeGuard Enterprise provides multi-layered endpoint data security combining encryption and data leakage prevention (DLP). The centrally managed solution secures data on desktops, laptops, PDAs, smart phones, and removable media. Its transparent data encryption enhances user productivity while preventing malicious users from reading lost or stolen media. Furthermore, SafeGuard Enterprise prevents endpoint data leakage by controlling access to both physical and wireless interfaces (e.g. USB, Firewire, WiFi) and storage devices (e.g., MP3 players, removable media).

Celebrating 25 Years of Data Security

Utimaco would like to thank its thousands of enterprises customers and millions of users worldwide, who have placed their trust in our SafeGuard data security products over the past 25 years. Utimaco continually strives to earn your trust with cutting-edge data security products that are designed to serve your needs today and tomorrow.

SafeGuard® DLP

Detects and prevents the unauthorized transmission of corporate data to anyone outside the organization.

SafeGuard® Management Center

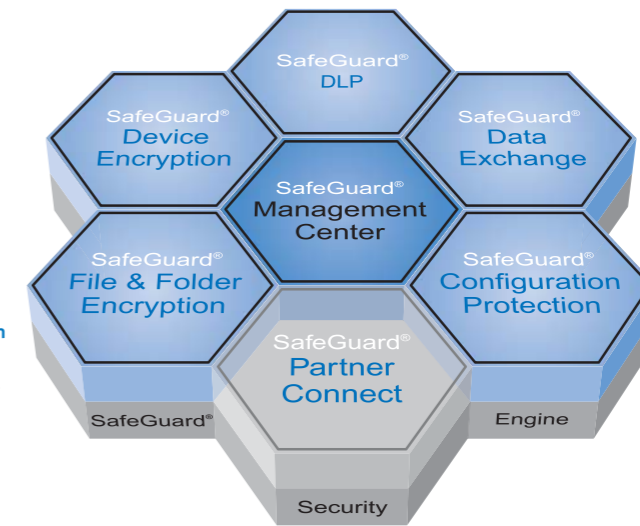

Implements and enforces common, organization-wide security policy framework, providing a central point of management control in mixed IT environments.

SafeGuard® Device Encryption

Transparently encrypts data on laptops, desktops, PDAs, smart phones, and removable media, protecting users against unauthorized access, loss, or theft.

SafeGuard® File and Folder Encryption

Encrypts user data across working groups. Protects data on local drives and network servers, both at the file and directory level.

SafeGuard® Data Exchange

Ensures the secure exchange of data (e.g., via removable media) with business partners and customers, even if they do not have a SafeGuard application installed.

SafeGuard® Configuration Protection

Offers central control over fixed and mobile devices, protecting against malware, inappropriate software use, and unauthorized configuration changes.

SafeGuard® Partner Connect

Manages external data security applications, e.g. Windows Vista BitLocker Drive Encryption, Intel encryption chipsets, Seagate encrypted drives, etc.

Business confidence with transparent security and data recovery

Encryption processes are automated and transparent to users, even during initial installation, allowing users to work without interruption. Fast and secure authentication with biometric fingerprint support. Recovering forgotten passwords is made easily with secure challenge responses — over the phone or online. In addition, SafeGuard Enterprise also supports standard system and data recovery and forensics tools.

Investment protection with scalable architecture

SafeGuard Enterprise offers superior scalability and broader compatibility compared to point security solutions, and its modular architecture supports rapid business growth. SafeGuard Enterprise can administer external encryption technologies such as BitLocker™ Drive Encryption, to secure data in Windows Vista™ operating system. The SafeGuard Enterprise architecture can be further extended to support encryption platforms and products from Intel and Seagate. Microsoft® Active Directory® directory services and Novell environments are also supported. In addition, support for third-party Smartcards, tokens, Trusted Platform Modules (TPM), and Hardware Security Modules provide seamless

“Microsoft® has a strong partner relationship with Utimaco and we’re excited about their next-generation introduction of SafeGuard. Microsoft worked closely with Utimaco’s development team to help ensure optimal support for innovative encryption technologies for Windows Vista and other products within our portfolio.”

—Gerry Albert, Group Manager at Microsoft and Director of SecureIT Alliance

security across users, devices, and platforms.

Your reliable security partner

Utimaco’s stellar track record is based on 25 years of experience safeguarding data for millions of enterprise users. Utimaco has received a number of industry awards and international certifications such as FIPS and Common Criteria. Utimaco works closely with a number of industry leaders in the technology sector, collaboratively developing and delivering full data security solutions worldwide.
